

On Hold Module

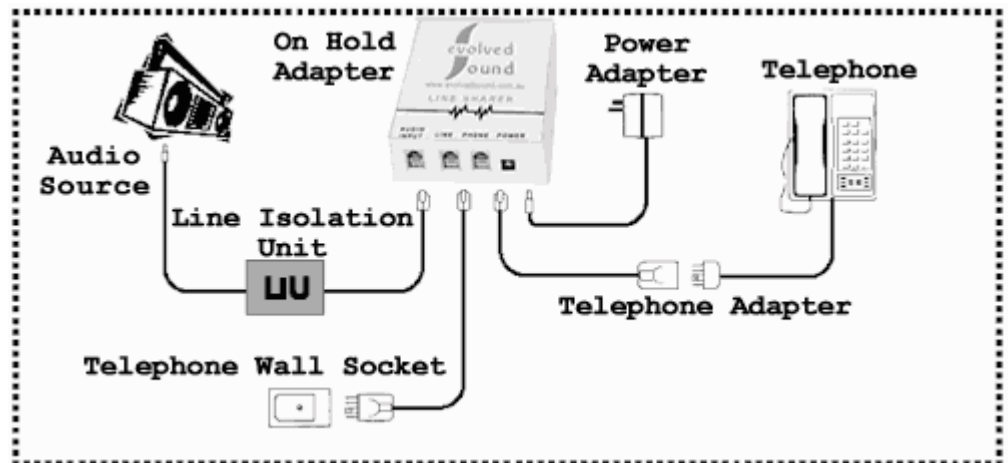

Now Messages and Music On Hold can be installed to any single telephone line.

The On Hold Module lets you connect and play on hold messages via a single telephone line. You no longer need a PABX or an expensive phone system to play telephone on hold messages. Simply connect this adapter between your single telephone socket and up to 4 telephones on that same line. To put a caller on hold, simply press the '2' key on your telephone keypad before hanging up. To take the call again, pick up any telephone on the same line.

Line Isolation unit (LIU)

Often a LIU is required to connect between your audio source and your PABX or On Hold Module. Our LIUs are also certified to provide additional protection against telephone line surges.

Simply connect any audio source to this low cost unit and add a professional touch to your line. Messages can be played from a CD Player, our Compact Flash Digital Player or even via your PC by combining the On Hold Module with our Automated Messaging Software.

The On Hold Module is Austel approved and it comes with a standard power pack unit and your own Line Isolation Unit (LIU). This system has never been so affordable!
